# Cloud-Clone Multiplex assay kits

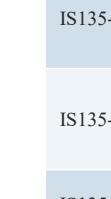

(Flow Fluorimetry Method)

Cloud-Clone Multiplex assay kits enable fast and efficient profiling of multiple proteins in a single well using the Multiplex xMAP technology. Multiplexing assays provide more data from each sample of plasma, serum, or tissue culture supernatant than do ELISAs, a critical feature when sample size is limited. Most importantly, you are able to achieve a more comprehensive study of protein signaling in your precious samples when multiplexing.

## Simultaneous analysis of multiple target proteins with only 20µl samples

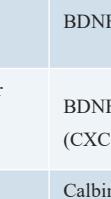

## Product Advantages of Cloud-Clone Multiplex assay kits

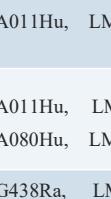

**Wider detection range**

1,000-10,000 times more than common ELISA kits

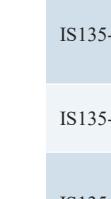

**Higher sensitivity**

10-100 times more sensitive than common ELISA kit

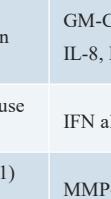

**More reliable result**

Avoid discoloration control and fluorescence attenuation

**Less sample size**

Minimum sample size is 20µl

**Save time and money**

One sample can be tested for eight targets simultaneously
